3. Enhanced Custom Elements Support

React 19 improves compatibility with custom elements, ensuring props are correctly passed as attributes or properties depending on the rendering context. `19.react.dev`

### 4. New Hooks for Form Handling

The `useActionState` hook simplifies form state management, handling validation, error states, and loading indicators, thereby reducing boilerplate code. `Vercel`

🧭 Why Upgrade?

Upgrading to Next.js 15 and React 19 offers:

- Improved performance through advanced bundling and caching strategies.

- Enhanced developer experience with simplified APIs and automatic optimizations.

- Better scalability and maintainability for modern web applications.

To get started with Next.js 15, you can create a new project using:

```bash
npx create-next-app@latest
```

For upgrading an existing project, run:

```bash
npm install next@latest react@latest react-dom@latest
```

Ensure to review the migration guide for any breaking changes. `Next.js 15`

Feel free to ask if you need assistance with migration or exploring these new features!
